

JDisc Measurement Add-On

Track Hardware Usage and Sensor Information

The JDisc Discovery Measurement Add-On gathers counter information for many devices and types. This information helps to consolidate your environment or prepare cloud migrations.

Define individual templates for Windows. A template may contain any counter offered by the Windows Perfmon infrastructure. Deploy any number of templates to a device.

Your benefits at a glance:

- Collection of any measurements
- Compare the infos
- Time curve
- Detailed overview of consumption and performance data

JDisc Discovery - Measurement Add-On Capabilities

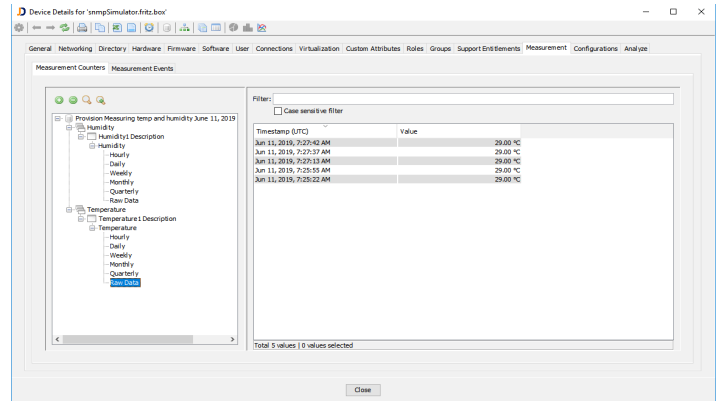

Printers

For most printers, JDisc Discovery collects the number of printed pages (total, color, b&w, duplex) and toner/ink levels. Aggregations show the values on an hourly, daily, weekly, monthly, or quarterly base.

Sensors

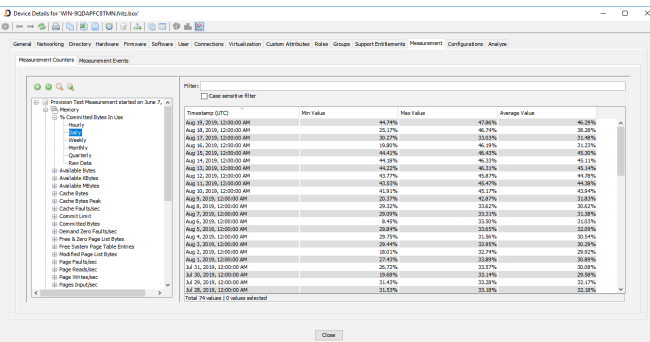

Sensor devices provide temperature and humidity information.

Windows Devices

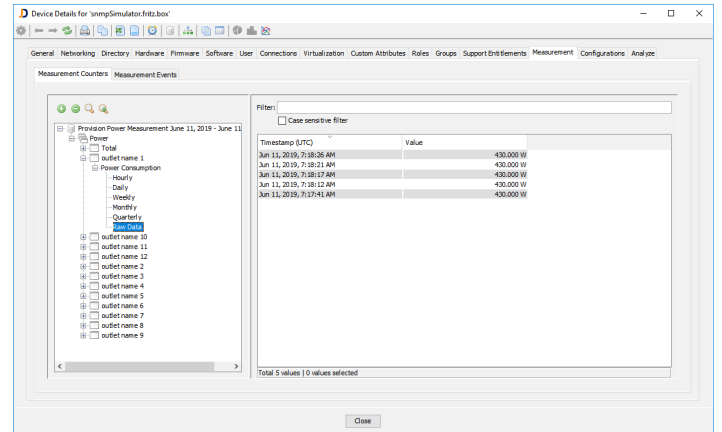

JDisc Discovery can collect any set of Windows Perfmon counters. A template defines which counters are part of the current configuration.

JDisc Discovery can also aggregate the values and show hourly, daily, weekly, monthly and quarterly statistics about min, max and average values.

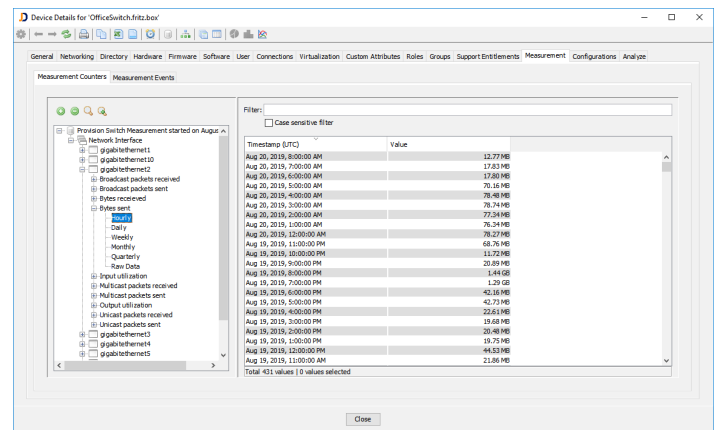

PDU's

JDisc Discovery collects the current power usage per socket.

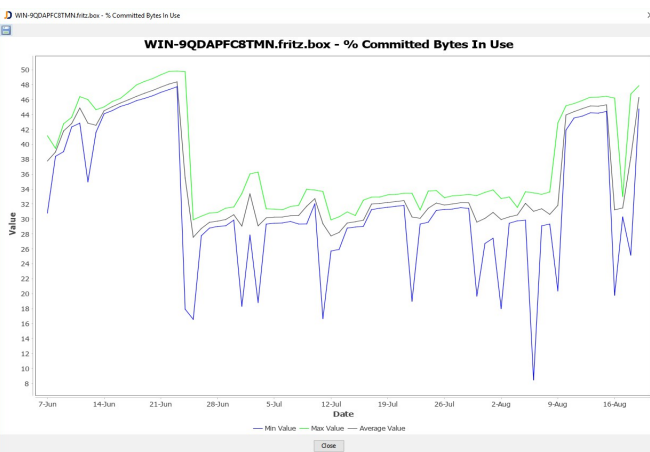

Routers and Switches

Switches and routers provide interface statistics such as packets per second, bytes sent, and more.

The built in interactive line charts graphically visualize the usage over time. Peaks and lows can easily be identified.

The measurement add-on requires a valid JDisc Discovery installation.
