

Find out how your Company is wired!

A must-have tool for network administrators!

JDisc Discovery already provides all the inventory information that you need at your fingertips. The Networking Add-On seamlessly integrates into JDisc Discovery and shows how your devices are connected to the network. In addition to determining network topology, the add-on also creates configuration backups of your routers and switches. The configuration history of your routers and switches will help you make the necessary configuration changes if something should go wrong on your network. Once again, all the information you need – right at your fingertips!

Your benefits at a glance:

- Identifies VRRP and HSRP clusters for switches and routers
- Interactive maps visualize the physical and logical network topology
- Shows all available and allocated router and switch ports
- Backs up your router and switch configurations
- Keeps a change history of your router and switch configurations
- Easy configuration of new data collection options for routers and switches
- Enhanced router inventory, including installed modules
- Discovers available WLANs and access points in the proximity of your computers

JDisc UG (haftungsbeschränkt)
Kuppinger Weg 25

Topology

- Discovers network topology using Cisco Discovery Protocol (CDP) and Link Layer Discovery Protocol (LLDP) information
- Determines how your devices connect to the network infrastructure using the bridge MIB.
- Creates physical and logical network topology maps
- Displays available and allocated router and switch ports

- Saves topology maps for later viewing
- Exports maps as images for integration in other documents
- Identifies which device is connected to which switch port
- Allows creating customized reports containing topology information

Enhanced Router and Switch Discovery

- Collects installed modules for all major routers and switches
- Associates network modules with network interfaces
- Detects VRRP and HSRP clusters for switches and routers

WLAN Discovery

- Discovers WLAN information and also access points in the proximity of your Windows and Mac OS X computers
- Integrates WLANS and device to WLAN access point connections into the physical network topology maps

Reporting

- Create your own customized topology reports including detailed device information
- Displays available and allocated router and switch ports

Configuration File Collection

Collect configuration files from

- Cisco IOS (Internet Operating System) routers and switches
- Cisco ASA (Adaptive Security Appliance) and PIX (Private Internet eXchange) firewalls
- HP ProCurve switches
- Maintain an unlimited history of all your configuration files
- Review the configuration at different points in time
- Compare any two revisions and find out what has changed
- Enhance the standard data collection with your own commands. For instance, add your own show commands (such as "show tech") for Cisco IOS devices

Support / Maintenance / Upgrades

- We offer free support during the evaluation phase
- We provide custom support via email and telephone hotline
- We offer consulting and training on request
- All software updates are included if a support contract is purchased.

Pricing

The networking add-on requires a valid JDisc Discovery installation.

- **Perpetual license:** Purchase a perpetual license if you want to use JDisc Discovery all the time. Pricing depends on the number of devices.
- **Project license:** Acquire a short-term license if you wish to use JDisc Discovery only for the duration of a project. The minimum duration is one week. Pricing depends on license duration (number of weeks) and number of devices.
- **Annual subscription:** Buy an annual subscription if you wish to use the product for one or several years. Pricing depends on the number of devices.
